

International Shiloh Shepherd Registry, Inc.  
 PO Box 309  
 Silver Springs, NY 14550

**To Apply For Adult Registration:**

The enclosed pink-bordered certificate of registration, showing the PIN registration number prefix is valid for fourteen (14) months from the date of birth of the dog. The owner of this dog must apply for adult registration when the dog is between twelve (12) and fourteen (14) months of age, unless an extension request was submitted to the ISSR, Inc. Extensions are valid for six (6) months and must be resubmitted as necessary prior to thirty (30) months of age.

1. Send the ISSR, Inc:
  - a. A copy of OFA or PennHIP report (Black/white upgrades only; a hip x-ray in the proper OFA position with correct labeling is needed)
  - b. A copy of a temperament certification. (See below)
  - c. Certified current height and weight as per ISSR rules and regulations.
  - d. Four clear current photographs (no Polaroids): front, rear, left and right.
  - e. A completed dominant and recessives virtues and faults chart prepared with your breeder (enclosed)
  - f. A copy of the front of the pink-bordered certificate of registration. (Correct all spelling if needed).
  - g. A \$25.00 processing fee.
  - h. Gold upgrades also need a detailed TCCP four-generation pedigree and LMI report.
2. If you have any questions, contact your breeder or one of the VIBs.
3. Send all items listed above, together in one packet, to: ISSR, Inc., PO Box 309, Silver Springs, NY 14550

## Instructions for Filling out the Dominants and Recessives Genetics Virtues and Faults Chart

Enclosed you will find a chart that you will need to fill out for each dog that you own when applying for his/her permanent registration certificate. Please be honest in your evaluation. If you are not sure, please contact your breeder or a VIB who can assist you.

This information will be entered into the TCCP database and is very critical to the future welfare of our breed! Please take the time to read the following suggestions carefully.

- Please print or type in all of your dog's information in the appropriate spaces on the enclosed form.
- Look at the enclosed chart, read items 1-81 carefully and then concentrate on your dog. Now go back to the chart and circle the faults that apply to your dog. Then circle the virtues. Please note: Items 71-81 are possible recessive traits only. Please do not use them as a dominant (what you can visually see) trait.
- Now you need to choose 7 numbers out of 81 that best describe your dog. Please list them in order of their importance.

**Example:** *Start by looking at your dog's head. Does it look "bitchy", e.g., extremely narrow like a Collie? Do his ears "kite out", e.g., stick out to the sides? Does he have a bad bite? Or does he look alert and noble? Does he have a broad head? Are his eyes round or almond shaped? What is the biggest fault you see in your dog? Is he perfect in structure except having a hooked tail? Study the Illustrated Breed Standard and then view your dog carefully! What is the number one most important feature your dog possesses? Could it be his excellent herding ability? Is he heavy boned but tall? Then you would pick #60. If he is heavy boned but short and stocky, then you would list #59. Is he thin but very tall? Then you would list #62, etc.*

- Now, concentrate on his/her littermates. Think about them carefully. What strong characteristics did they possess? What faults did they have? Talk to their owners and ask your breeder. If you are not sure, investigate! Part 2 of the Dominants and Recessives chart is extremely important. This information can be very critical to any further breeding program that your dog or his progeny or littermates may be involved in. Honest data will help us to produce better Shiloh Shepherds.

You must call your breeder, talk to the people who own your dog's littermates. Investigate. Did any of your dog's littermates have soft ears? Bad hips? Spooky temperaments? Did they all meet size requirements? Be honest! List these faults and virtues in order of importance under "Recessives". There is no such thing as a perfect dog. You must list your dog's dominants and recessive faults in order to protect the future of our breed!

Please note: if your dog had his tail amputated in a car door accident, he does not carry a genetic factor for short tails. If your dog was abused as a puppy and is now afraid of men with beards, #38 does not apply. Please use the extra space provided for your comments. If in doubt, please enclose a picture and/or explanation.

Above all else, please try to understand that this program is designed for the future well being of our breed! If your dog has kite ears, but fantastic hips, super intelligence, huge size, etc., that does not mean that your dog should not be bred. What it does mean is that your dog should not be bred to another dog that has soft eared littermates! That's why the information in our computerized breeding profiles is so very important! Please do your part to help us maintain the absolute best standards possible!

Thank you for your cooperation!

Tina M. Barber  
President  
Breed Warden  
International Shiloh Shepherd Registry, Inc.

## Genetic Virtues and Faults

The code numbers will be prefixed by either “DGC” for dominant characteristics or “RGC” for recessive characteristics (seven code limit).

### Genetic Faults

|     |   |     |   |
|-----|---|-----|---|
| 01. | Gunshy – Extreme noise sensitivity                            | 21. | Roach back / short coupled                              |
| 02. | Monorchid – Cryptorchidism                                    | 22. | Too long bodied / over angulated rear                   |
| 03. | Cardiovascular disorders (PDA) (PRAA) (AV/SLVE) (SAS)         | 23. | Steep / flat croup – poor tail set                      |
| 04. | Digestive tract disorders (Esophageal Achalasia) etc          | 24. | Narrow / weak hindquarters                              |
| 05. | Hip dysplasia – Shallow Acetabulums and/or severe Subluxation | 25. | Cow hocked / faulty rear drive (narrow thigh/high hock) |
| 06. | Ununited Anconeal Process – Osteochondrosis                   | 26. | Short / hook / kinked / gay tail                        |
| 07. | Overshot or undershot bites – missing or extra teeth          | 27. | Poor structure / too short and stocky                   |
| 08. | Narrow or snipey (bitchy) head                                | 28. | Neck too long / too short / unproportionate             |
| 09. | Round / protruding / droopy eyes                              | 29. | Undersized / small fine bone                            |
| 10. | Soft / weak ears  | 30. | Inadequate stop / Roman nose                            |
| 11. | Kite ears (leaning off to the sides)                          | 31. | Umbilical hernia / uterine inertia                      |
| 12. | Oversize (to tall) or bonnet ears                             | 32. | Extra long / curly / wooly coat                         |
| 13. | Flat chested / poor shoulder – front assembly                 | 33. | Too short / open or close: coat                         |
| 14. | Weak pasterns / soft-splay feet                               | 34. | Skin allergies / dermatitis / mange                     |
| 15. | East/west front / pinched elbows                              | 35. | Faded pigment / washed out colors                       |
| 16. | Loose lips / light or faded muzzles                           | 36. | Shy temperament (overly cautious)                       |
| 17. | Hare feet (extra long toes)                                   | 37. | Sharp-shy temperament (non-approachable)                |
| 18. | No wither / low stationed                                     | 38. | Spook-coward temperament (extremely fearful)            |
| 19. | Skinny / extremely narrow structure                           | 39. | Unstable temperament (psycho)                           |
| 20. | Soft / weak / sway back                                       | 40. | Dull-sluggish temperament (non-attentive)               |

### Genetic Virtues

|     |  |   |  |
|-----|--|---|--|
| 41. | Herding ability / excellent agility                          | 62.   | Tall/Leggy (with good stifle and hock)                     |
| 42. | Schutzhund (working quality)                                 | 63.   | Nice sickle hocks – well rounded stifle                    |
| 43. | Super intelligent (problem solver)                           | 64.   | Wither – high and well defined                             |
| 44. | Easily trained (responsive-willing worker)                   | 65.   | Perfect saber tail – well set in croup                     |
| 45. | Good temperament (very sociable)                             | 66.   | Extra wide rear – exceptionally strong                     |
| 46. | Alert and noble (bearing the look of eagles)                 | 67.   | Excellent movement (perfect flying trot)                   |
| 47. | Good hips (exceptional genetic strength)                     | 68.   | Well balanced - easy flowing movement                      |
| 48. | Good bite (genetically correct dentition)                    | 69.   | Excellent feet and pasterns (as per standard)              |
| 49. | Strong ears (correct as per standard)                        | 70.   | Excellent stamina (untiring)                               |
| 50. | Broad head (correct as per standard)                         | <b>Please list as RGC only (per your dog's littermates)</b> |  |
| 51. | Almond eyes (expressive, dark, well formed)                  | 71.   | White recessive (in first three generations)               |
| 52. | Good nose (exceptional air scent – tracking ability)         | 72.   | Black recessive (in first five generations)                |
| 53. | Muscled neck (strong, perfectly proportioned)                | 73.   | Smooth coat (all litter mates – first five generations)    |
| 54. | 45° Chest-wither-elbow (perfect front)                       | 74.   | Plush coat (all litter mates – first three generations)    |
| 55. | Deep chest – strong well balanced front                      | 75.   | Bi-color alleles (in first three generations)              |
| 56. | Good strong top line (as per breed standard)                 | 76.   | Sable with no black/tan factor (in first four generations) |
| 57. | Excellent hindquarters (as per breed standard)               | 77.   | Aloof temperament (totally loyal-devoted to family only)   |
| 58. | Extra oversize (bitches over 28" – males over 30")           | 78.   | Hard temperament (independent)                             |
| 59. | Broad stocky body with well sprung ribs                      | 79.   | Medium-hard temperament (protective)                       |
| 60. | Heavy exceptionally thick and oval bone                      | 80.   | Medium-soft temperament (very sociable)                    |
| 61. | Super structure – perfectly balanced (as per breed standard) | 81.   | Soft submissive temperament (marshmallow)                  |

For additional details regarding specific faults and/or virtues listed, please contact your breeder or refer to one of the VIBs .
